

# How to expand the size of the dropdown-menu in the navigation

If you have a navigation point in your menu with a bigger dropdown it will generate a longer list. When you don't want to scroll down every time than it is possible to expand the dropdown menu with a javascript inside you custom HTML. With following script you can change the amount of tables which are displayed in the dropdown menu:

```
<script type="text/javascript">
  window.EnterpriseTheme = window.EnterpriseTheme || {};
  window.EnterpriseTheme.MegaMenu = window.EnterpriseTheme.MegaMenu || {};
  window.EnterpriseTheme.MegaMenu.rowItems = 5;
</script>
```

## Confluence administration

### CONFIGURATION

- General Configuration
- Congrats
- Further Configuration
- Homepage Redirect for Confluence
- Shop Configuration

## Custom HTML

At end of the HEAD

```
<script type="text/javascript">
  window.EnterpriseTheme = window.EnterpriseTheme || {};
  window.EnterpriseTheme.MegaMenu = window.EnterpriseTheme.MegaMenu || {};
  window.EnterpriseTheme.MegaMenu.rowItems = 5;
```

At beginning of the BODY

In this case we changed the number of displayed tables to 5: `window.EnterpriseTheme.MegaMenu.rowItems = 5;`

In this line you can define the tables as you are requiring it.
