

Button

 This documentation covers version **6.1.17** of the Enterprise Theme plugin.

- [Button](#)
 - [Parameter](#)
 - [Example](#)
- [Referencing to Confluence pages](#)
- [Related Topics](#)

Download and install the Enterprise Theme App from the Atlassian Marketplace or through the Atlassian Universal Plugin Manager.

Button

{gu-button-theme}  [Documentation](#) 

Displays a button or link in theme style.

`formatting`

Parameter

Name	Description	Type	This is a required field	Default	Values
Title <code>title</code>		string			
Button icon <code>buttonIconFont</code>	Optional you can define an icon for that button.	string			
Button image URL <code>buttonIconAttachment</code>	Optional you can define an icon by URL for that button.	string			
Confluence page link <code>contentLink</code>	The link to the Confluence page or blog post.	confluence-content			
Plain link <code>link</code>	Optional you can use a normal link instead of a <i>Confluence page link</i> . If this plain link is defined the content of the <i>Confluence page link</i> parameter is ignored.	string			
Link or button <code>link_or_button</code>		enum		button	button, primary_button, primary_button_inverse, link
Internationalization i18n key for the title <code>i18n</code>	Any available i18n key can be used.	string			
CSS class <code>class</code>	Sets the class attribute of the element for styling or extended functionality. If you add the css class <i>bv-create-button</i> the create content dialog opens on click.	string			
Specific width <code>width</code>		string			
Font color <code>link_color</code>		string			

Floating float		enum			, none, right, left
-------------------	--	------	---	--	---------------------

Example

Referencing to Confluence pages

The parameter Link can be filled with a page title to reference to a page within the same space.
If you want to reference to a specific part of Confluence or a different space the format needs to be like this:

Link
<code>/display/SPACE/page</code>

If working with context path don't forget it to add to the path:

Link
<code>/confluence/display/SPACE/page</code>
