

Landing Pages

What are landing pages?

Setting a page as a landing page puts the focus on the content of the page by removing several elements that normally surround the content.

A page viewed as embedded page...

The screenshot shows a Confluence page titled "Enterprise Theme Plugin" viewed as an embedded page. The page is surrounded by a navigation sidebar on the left and a top navigation bar. The main content area shows a header with "Enterprise Theme Plugin", a description, and a "Download" button. The sidebar contains a list of pages and blog posts.

... the same page viewed as a landing page.

The screenshot shows the same "Enterprise Theme Plugin" page viewed as a landing page. The page is centered and takes up most of the screen. The navigation sidebar and top navigation bar are removed. The main content area shows the same header, description, and "Download" button as in the previous screenshot.

On this page:

- [What are landing pages?](#)
- [Enable landing page view](#)
- [Enable embedded page view](#)
- [Permissions](#)

Related pages:

- [Sections](#)
- [Dashboards](#)

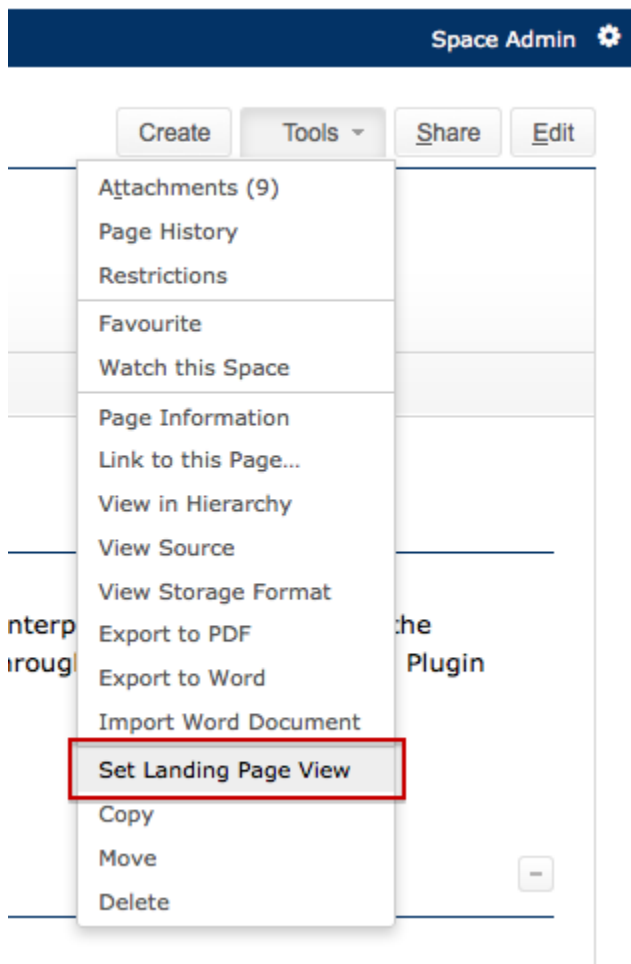

The content of a page, when viewed in a space in which the Enterprise Theme is enabled, is surrounded by [sections](#) such as the header and footer, the sidebar and the section below the content. Furthermore there are several other elements like the page metadata, buttons to watch, edit, share, etc. By setting the page to be a landing page, you can set the focus on the content.

Landing pages are particularly useful when the page is used as a [dashboard](#) or for a more prominent startpage of a space.

Keep in mind that by setting a page to be a landing page, you might remove the page tree which is commonly placed in the sidebar. So make sure to provide some sort of navigation option in order to not confuse users visiting that page.

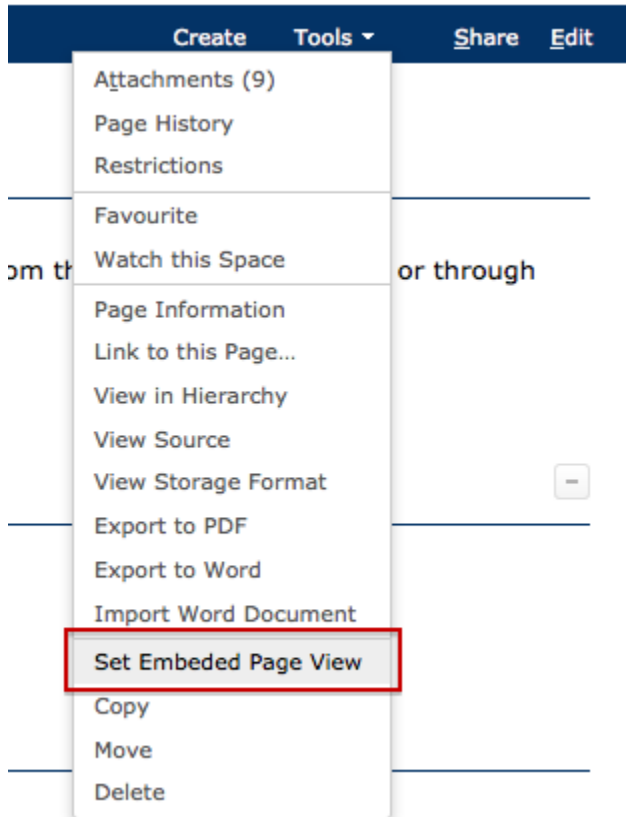

Enable landing page view

A page can be set as a landing page in the **Tools** menu with the option **Set Landing Page View**.

Enable embedded page view

Likewise, a page can be set to the embedded page view mode in the **Tools** menu with the option **Set Embedded Page View**.

Permissions

A user needs to have the permission to edit a page in order to toggle between landing page and embedded view mode.
