Overview

In Confluence, you can define only one global homepage. The Homepage Redirect app takes it one step further: Administrators can assign unique homepages to several individual user groups. As soon as user access Confluence, they are redirected to a homepage that was set up for their user group.

The destination of the redirect can be a page, a blog post or a space homepage. If the defined page has a pre-defined design, the page will be displayed exactly in that way. This makes the app Homepage Redirect most valuable to all customers with tailored Confluence colour schemes and and/or third-party skins and themes.

The Homepage Redirect app works well in combination with our [Enterprise Theme](#) app.

Use Case

Typical applications:

- Holdings with a unique corporate design per subsidiary
- Companies with different homepages per business unit or departments

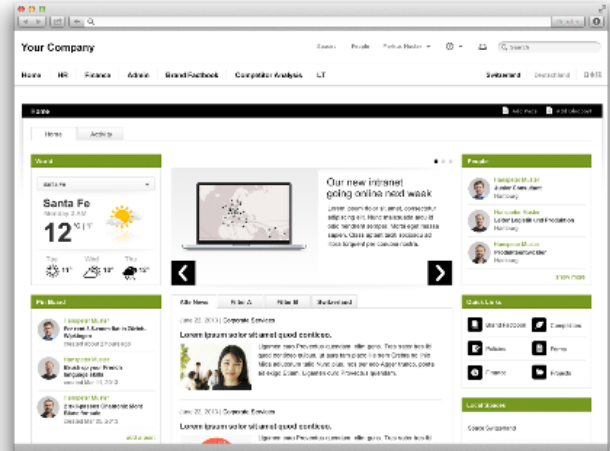

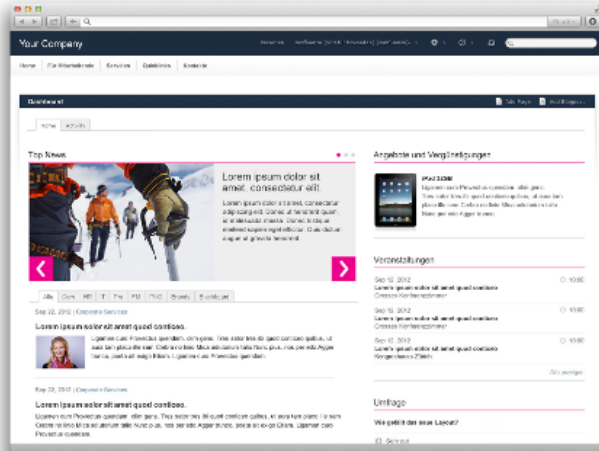

- Businesses with the need for separate homepages for clients and external partners

Internal Users

External Users

Manage redirects

How to manage redirects

1. Choose the **cog icon** , at the top right of the screen, then choose **General configuration**.
2. Select **Homepage Redirect** under **Configuration** in the left-hand panel.

Homepage Redirect

Groups	Page	Operations
unit-it	IT Documentation Overview (ds)	Edit Delete
unit-sales	Sales reports (ds)	Edit Delete
confluence-users-internal	External Space Home (ds)	Edit Delete
confluence-users-external	Internal Company Home (ds)	Edit Delete

Help Tips
Forward user groups to their dedicated homepages.

The first matching redirect definition (based on the user membership) is used to redirect the user. You can use drag and drop to change the order of the membership checks.

In the Homepage Redirect administration, you have the following possibilities:

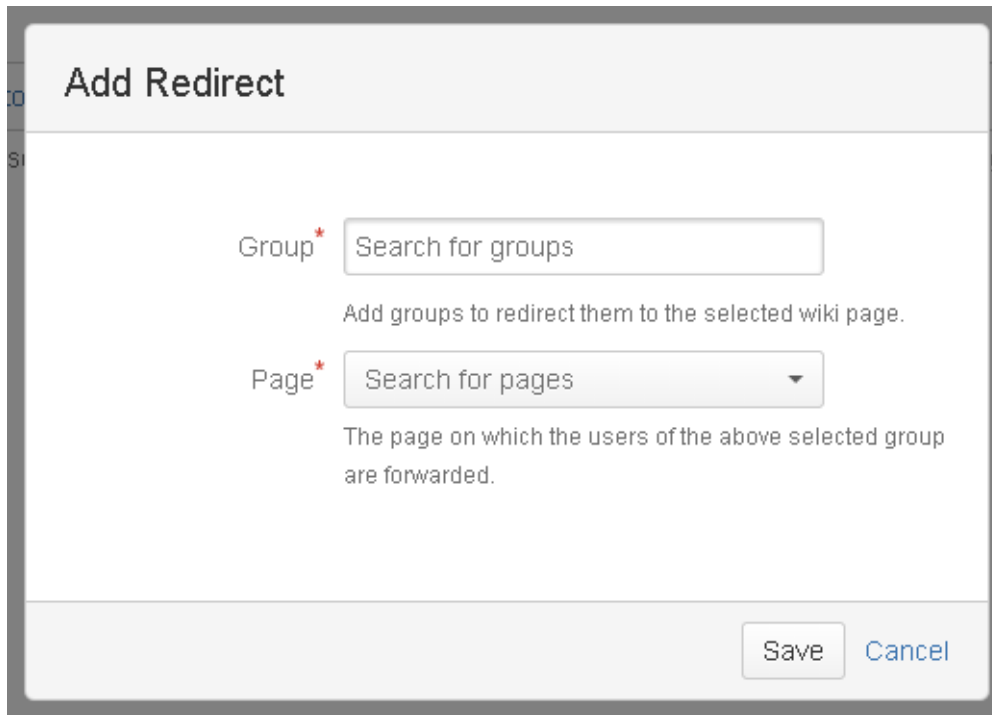

- Add a new redirect by clicking the **Add Redirect** button
- **Edit** properties like group and the redirect destination
- **Delete** a redirect
- Reorder the redirects by dragging and dropping elements

 **Which redirect is used if the user has multiple groups?**

The first matching group is used to redirect the user.

Create redirects

Click the **Add Redirect** button to add a new redirect, which brings up the following dialog:

Add Redirect

Group *

Add groups to redirect them to the selected wiki page.

Page *

The page on which the users of the above selected group are forwarded.

Group

The group or groups you would like to redirect.

Page

The destination of the redirect. This can be a page, a blog post or a space homepage.
